RoadHawk 600

The world's most advanced
4G telematics camera

The groundbreaking RoadHawk 600 from Trakm8 is the first 4G camera combined with fully-featured telematics. This compact device features a choice of single or dual cameras with detachable heads. It automatically provides harsh event videos plus live streaming, videos on demand and video and still pictures on event. In addition, it provides the telematics functionality of our most advanced tracking devices, including driver behaviour, CANbus integration, driver ID and our Connected Care™ vehicle diagnostics.

There's no need for the cost of installing a separate camera and a telematics unit. The RoadHawk 600 provides our leading-edge camera technology combined with all of the functionality of our most sophisticated tracking units in a single compact device.

4G Connectivity

A 4G modem, combined with advanced video compression, offers the fastest available download speed and ensures you can see important events as soon as they happen.

2x Optional Cameras

The RoadHawk 600 comes with one forward-facing camera and can be fitted with an additional lens if required. Each camera can be pivoted to any position or can be detached and placed in any position. A combination of driver perspective and in-cab views is ideal for validating insurance claims, driver coaching and ensuring passenger safety.

Integrated EcoN Lightbar

The integrated lightbar uses visual in-cab feedback to promote safer, more efficient driving. By equipping the driver with a tool for continuous and real-time driver behaviour improvements, accident rates can be reduced and fuel costs slashed.

Fully-Featured Telematics

The RoadHawk 600 provides all the capabilities of a fully featured tracking unit. It can integrate with your vehicle to provide the information that you need to manage your fleet and reduce operational costs including fuel usage, driver behaviour and CANbus. In fact it has all the functionality you'd expect to find in our class-leading range of telematics devices.

Connected Care™

Predict breakdowns before they happen and reduce the time and cost of identifying maintenance issues with RoadHawk 600's vehicle health updates. The device's connected car capabilities also provide accurate fuel levels, real MPG alongside service and insurance renewal reminders.

The world's most advanced
4G telematics camera

Video On-Demand

The system automatically sends footage of harsh events, and other incidents are available at the touch of a button. Download and review any pictures and video footage for evidence in insurance claims and improve driving performance using actual event-based video coaching.

Automated FNOL Events

Automatically capture and report crash events. Trakm8 is also able to push the data to third parties such as insurers or police to minimise stress, improve downtime and minimise business impact.

SWIFT REPORTS

Create bespoke alerts and reports on multi-dimensional metrics. The device can be configured to record video in certain eventualities by creating rules, for example a picture of the driver at the start of every journey.

ADAS*

Our Advanced Driver Assistance Systems monitor high-risk behaviours such as mobile phone usage, insufficient concentration on the road, and driver micro-sleeping, ensuring the safest environment for your drivers and your business.

* Not all functionality available at launch

Points of Interest

Create geo-fences around points of interest such as depots, collection points, and service stations and monitor vehicle's entry and exit times. The device can be configured to capture live footage or a still image on entry or exit of a predefined zone, providing detailed time-on-site reports and acting as a security measure for out-of-hours use.

Live Video Streaming

Having the ability to monitor drivers in real-time assists in reducing driver distraction and unsafe driving practices. Live data also improves customer service through the provision of real-time driver locations, and is able to provide fleet managers with further insights into delays or driver welfare in the immediate aftermath of a collision.

No Data Restriction

Our advanced video compression system means that you're not limited to just a couple of video transmissions a week like most live cameras on the market. Our basic tariff allows up to 250 videos, 125 still images and 10 minutes of live streaming each month.

Picture in Picture view*

Review forward and rear-facing camera footage at the same time, giving fleet managers a holistic view of events.
